

SIMON GONZALEZ

Software Engineering Student, Polytechnique Montréal

Mont-Royal, QC | 514-246-6924 | simon.gonzalez.business@gmail.com | [GitHub](#) | [LinkedIn](#) | Open to relocation

EDUCATION

B.Eng., Software Engineering, Polytechnique Montréal

Expected 2029

Relevant coursework: Python Programming, C++ Programming, Microcomputer Architecture; Fall 2026: Java Programming, Data Structures & Algorithms

- Programmed a finite-state navigation controller in C++ for a four-person autonomous robot, combining infrared sensing and closed-loop motor corrections to complete the full course.

DEC, Computer Science & Mathematics, Collège André-Grasset

2025

TECHNICAL SKILLS

Languages: Python, C++, SQL, TypeScript, JavaScript

Cloud & Infrastructure: GCP (BigQuery, Cloud Run, Airflow, Secret Manager, IAM), AWS, Docker, GitLab CI/CD, Linux/Unix

AI & ML: Gemini APIs (Live, ADK, Enterprise), LLM tool-calling agents, TensorFlow/Keras, OpenCV, RPA (Microsoft UI Automation, pywinauto)

Backend & Web: Node.js, Express, REST APIs, WebSockets, PostgreSQL, React, Angular, pytest/unittest

EXPERIENCE

Data Engineering Intern, Bell Canada

May 2026 - Aug 2026

- Proposed, designed, and independently led a Python/SQL Jira analytics platform spanning more than 500 projects; presented the initiative to directors and prepared technical handoff and developer onboarding.
- Built a daily Airflow-orchestrated ETL pipeline using Cloud Run Jobs and BigQuery, with batched asynchronous Jira API requests, server-side JQL delta loads, strict universal schemas, and transformed operational views.
- Hardened the pipeline with service-account access, Secret Manager, retry logic, structured logging, validation tests, and GitLab CI/CD; now under review for promotion to production.
- Developed a stakeholder application that serves curated BigQuery views through an internal API gateway, so clients never query the warehouse directly.
- Automated Jira-to-Excel data preparation and BI reporting for the RPA team, saving project managers multiple hours per week.
- Designed a Gemini Enterprise agent with Gemini ADK tools that writes read-only SQL against BigQuery, with structured prompts, permission controls, and query validation.

Co-Founder & CTO, Technologies Auralis

Jan 2026 - Present

- Architected a multilingual, real-time voice-ordering platform using Python, Gemini Live, Twilio, and autoscaling Cloud Run services for a paying Montréal food distributor handling around 50 daily calls and hundreds of SKUs.
- Designed a hybrid deterministic and AI conversation flow that minimizes dialogue, matches callers and products against migrated PostgreSQL data, validates multi-item orders, supports English, French, and Chinese, and escalates to staff when needed.
- Integrated human-confirmed orders with Sage BusinessVision through an AI-enhanced RPA platform built with Microsoft UI Automation, pywinauto, OpenCV, and OCR; supports autonomous phone-to-ERP processing while retaining production oversight.
- Created daily incremental pipelines from a legacy Windows server to GCP PostgreSQL and completed pytest/unittest, end-to-end, and simulated-call testing before a live customer pilot, enabling after-hours ordering and reducing entry time and errors.
- Designed consent-aware capture of call interactions to improve matching and agent performance.
- Previously shipped revenue-generating AI mobile apps distributed in 172 countries.

VP of Development, Poly AI, Polytechnique Montréal

Mar 2026 - Present

- Lead a six-person team delivering Angular web apps and containerized Python evaluation services on AWS for CodeML hackathons serving 500+ participants; design ranking algorithms that identify the strongest ML models.
- Act as product architect and repository maintainer, translating requirements into system design, reviewing code, and guiding implementation and release decisions across the development team.

SELECTED PROJECTS

Azul, Local AI Coding Agent (TypeScript, React/Ink, Express, llama.cpp)

2025

- Built an approval-controlled agent for file, shell, and search tools with local inference; designed a TypeScript monorepo, terminal UI, Express backend, and WebSocket streaming at 20 tokens per second.

Emotion Recognition from Grayscale Images (TensorFlow, Keras)

Oct 2025

- Trained and evaluated a convolutional neural network, achieving 74% accuracy and a 0.69 F1 score on 64x64 facial images.

Giselle, AI Resume and Interview Evaluator (1st Place, McGill Case Competition)

Apr 2025

- Built a full-stack evaluator using structured LLM outputs, JSON validation, retry logic, and speech-to-text to assess seven competencies.

CERTIFICATIONS & LANGUAGES

Certifications: IBM Full-Stack Software Developer (2025) | Google Cybersecurity Foundations (2024)

Languages: English and French (native), Spanish (fluent)

Interests: Meritas leadership award | National Pool Lifeguard | Taekwondo red belt (12+ years)
